

Software Requirements Specification (SRS)

Project: CampusHub – Smart Academic & Campus Event Management System

1. Introduction

CampusHub is a web-based platform that centralizes academic and campus event management. It enables students, faculty, coordinators, and administrators to manage assignments, attendance, marks, study materials, announcements, clubs, venues, and event registrations from a single dashboard.

2. Objectives

- Provide role-based secure access using JWT authentication.
- Simplify academic and campus event management.
- Improve communication through announcements and notifications.
- Maintain centralized student and event records.

3. Functional Requirements

Module	Features
Authentication	Login, JWT, Role-based Access
Students	Profile, Attendance, Marks
Faculty	Assignments, Study Materials
Events	Create Events, Registration
Admin	Users, Clubs, Venues, Announcements, Reports

4. Non-Functional Requirements

Responsive UI, Secure Authentication, PostgreSQL Reliability, Fast Response Time, Scalability, Easy Maintenance.

5. Technology Stack

Frontend: React.js & CSS
Backend: Spring Boot, Spring Security, Spring Data JPA
Database: PostgreSQL
Authentication: JWT

Page 2

6. External APIs

API	Purpose
Cloudinary API	Upload and store images/documents.
Google Calendar API	Sync assignment and event schedules.
JavaMail API (if configured)	Email notifications for users.

7. System Architecture

Request -> Authentication -> Business Logic -> Database -> Response

8. Conclusion

CampusHub provides an integrated platform for academic administration and campus event management. The system improves communication, simplifies administrative tasks, and offers a secure, scalable architecture for educational institutions.
