

Software Requirements Specification (SRS)

Project: CampusHub – Smart Academic & Campus Event Management System

1. Introduction

CampusHub is a web-based academic and campus management system developed using Spring Boot and PostgreSQL. It enables secure management of students, faculty, attendance, marks, assignments, study materials, events, clubs, venues, announcements and registrations through a centralized platform.

2. Objectives

- Secure user authentication
- Centralized academic management
- Campus event management
- Dashboard analytics
- Efficient communication using announcements

3. Functional Requirements

Module	Features
Authentication	Login, Registration
Students	Student Management
Faculty	Faculty Management
Attendance	Attendance Records
Marks	Marks Management
Assignments	Assignment Management
Study Materials	Upload & View
Events	Create & Register Events
Clubs	Club Management
Venues	Venue Management
Announcements	Campus Notices
Registrations	Event Registration
Dashboard	Statistics & Analytics

4. Non-Functional Requirements

Security, Scalability, Fast Response Time, PostgreSQL Reliability, Easy Maintenance.

5. Technology Stack

Frontend: React.js

Backend: Spring Boot, Spring Security, Spring Data JPA

Database: PostgreSQL

Build Tool: Maven

6. External APIs

API	Purpose
Cloudinary API	Image/File Upload
Google Calendar API	Calendar Scheduling
JavaMail API	Email Notifications

7. System Architecture

8. Conclusion

CampusHub provides a centralized solution for academic administration and campus event management. The system improves efficiency, maintains secure records, simplifies event coordination, and offers a scalable Spring Boot architecture.
